

## DataShield™ Backup & Recovery

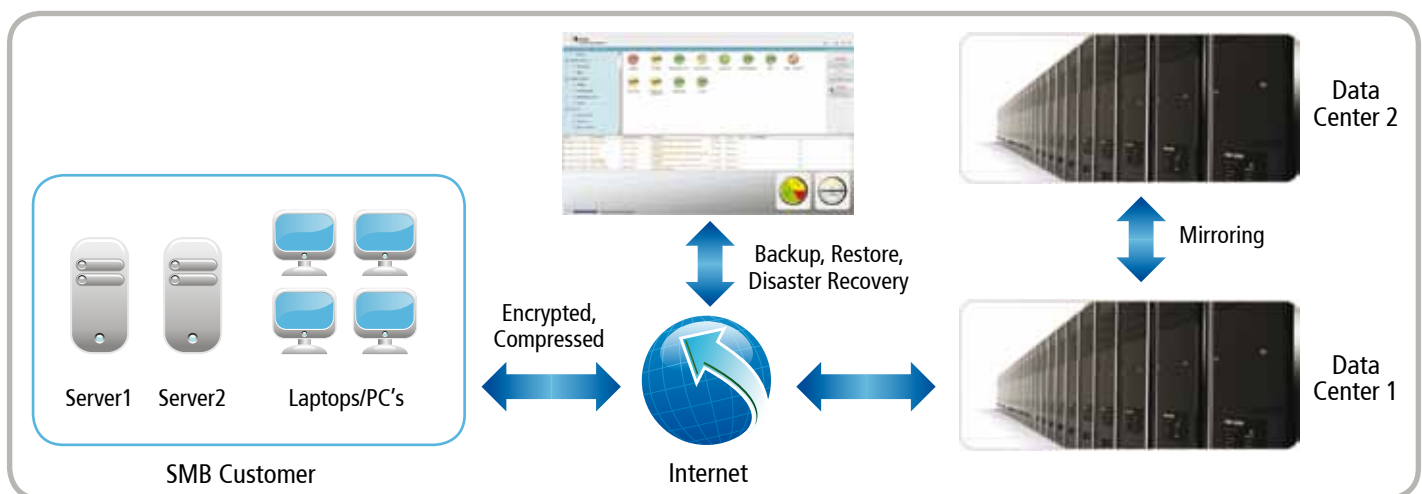

A centrally managed online backup and disaster recovery solution specifically designed for SMB system integrators and their customer base.

### Streamline Business Processes

- 24/7 data availability
- Secure remote Data center - Fully redundant with zero downtime
- Snapshots/Restore points - Ability to restore earlier versions of files
- Highly efficient increment calculation and Compressing algorithm – Reduce system workloads
- Uninterrupted business operations, even during backup
- Direct & immediate access to data in case of disaster
- Backup Open Files, MS Exchange Mailboxes & SQL server

### Reseller Benefits

- Centrally Managed and Monitored by the Atera Unity
- Daily backups without human intervention
- Quick installation and deployment
- A 4-level User management hierarchy (Atera Networks, integrator, backed up client)
- No hardware
- Daily summary reports: log summaries, user confirmations & storage usage

### DataShield™ – The risk and threats

Ensuring your customer's data is secure and recoverable is a crucial task for IT service providers and system integrators. Infrastructure breakdowns, power surges, natural disasters, and human errors can cause significant data damages. Recovery from these frustrating events takes weeks and entire sections of the company might be paralyzed during this period.

### DataShield™ – A Smart Backup solution

DataShield™ Online backup ensures that critical systems and data are easily recoverable and managed through the user interface and the Atera Unity™. All the important data is encrypted and compressed before being uploaded and stored on the DataShield™ backup server. DataShield™ uses an innovative incremental backup

technology that eliminates time-consuming manual daily backup procedures and obsolete tapes.

### DataShield™ – simple to implement, easy to manage

The system user interface is cleanly laid out ensuring that backup and restore can be done within a few clicks. The management console provides complete comprehensive online & Email reports in several languages. DataShield™ allows you to become a Managed Service Provider (MSP) and distinguish yourself by adding a backup solution to your service offerings.

## Managed by Unity™

Manage your whole install base from a single unified view.

## Daily email report - no missed backup

A daily report is sent to the integrator and end user alerting both on successful and failed backups.

## Advanced security

128 bit AES encryption, unique user selected key, proprietary transfer protocol.

## Smart Incremental backup

Automatic, monitored and compressed Block level backup of modified and new files - Saves time, bandwidth & system resources.

## Backup SQL, Exchange and file servers

Backup all your mission critical data with a press of a button.

## 30 day Snapshots

Each user can restore any file from 30 days in the past.

## World Class Data Center

DataShield™ protects your data in multiple data centers with 24/7/365 onsite monitoring and security, state-of-the-art fire suppression systems. Redundant power distribution and diesel generators ensure that in any circumstance your data is protected.
